                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 630 CTGAAGGAGAAGGCTGTCCTTTTACTACACCATTTTTAGTCTTTTTCTTCTGAATTCATTA
Submitted (04-JAN-2005) Biological Chemistry and Molecular Pharmacology, Harvard Institute of Proteomics, 320 Charles St., Cambridge, MA 02141, USA
This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics. This ORF clone has been cloned with normalized stop-codon. AttB recombination sites have been added to either end of the ORF and

AttB recombination sites have been added to either end of the ORF and directionally cloned using the Gateway cloning system into pDONR 201. Additional sequences in the clone: 'ACC' before the 'ATG' (corresponding to ribosomal binding site an Kozak consensus sequences). Each clone is clonally isolated and

Polypeptides derived from JNK3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the SalI and HindIII sites of the DNR-DDAL vector. Additional sequences in the clone: 'ACC' after SalI site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame. Clone distribution: http://bioinfo.clontech.com/orfclones.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for institutional polymorphic variation associated with breast cancer. The method of the polymorphic variation associated with breast cancer. The method of the invention demonstrates cytostatic activity and may be useful for identifying a risk of, preventing and/or treating breast cancer and cancer metastasis. The methods may be utilized for gene therapy or RNA interference. The current sequence is that of the human mitogen-activated protein kinase 10 (MAPKIO) SNP-containing gDNA MAPKIO-AC of the invention which is located at chromosome 4q22.1-q23.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for identifying a subject at risk of breast cancer comprising detecting the presence or absence of a polymorphic variation associated with breast cancer. The method of the invention demonstrates cytostatic activity and may be useful for identifying a risk of, preventing and/or treating breast cancer and cancer metastasis. The methods may be utilized for gene therapy or RNA interference. The current sequence is that of the human mitogen-activated protein kinase 10 (MAPKIO) SNP-containing gDNA MAPKIO-AD of the invention which is located at chromosome 4q22.1-q23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 823
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Roth

                                                                                                                                                                                                                                                                                                                                                The specification describes derivatives of JNK (c-jun N-terminal kinase) 3, which have deletions from the N-terminal region corresponding to positions 1-38 of the JNK3alphal and alpha2 isoforms or a C-terminal deletion from position 139. JNK are mitogen-activated kinases implicated in neurodegeneration and apoptosis of neurons. The derivatives are used to identify specific ligands. These ligands, and JNK3-specific antibodies, are used for prevention or treatment of neurodegenerative diseases, e.g. Alzhelmer's, Parkinson's or Huntington's diseases, degeneration associated with aging or acquired immune deficiency syndrome, brain injury, or cerebral amoxia, hypoxia or edema. Vector containing sequences encoding the derivatives are useful in gene therapy, e.g. of spinal cord injury and retinal degeneration. The present sequence encodes the derivative JNK3deltaNalpha2
                                                                                                                                                                                                                                                                                                      Sequence 1422 BP; 436 A; 322 C; 329 G; 335 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for identifying compounds that modulate CC c-Jun N-terminal kinase 3 (JNK3) expression or activity. The method CC comprises (a) incubating a cell that can express a JNK3 protein, or that CC has JNK3 activity, with a compound under conditions and for a time CC sufficient for the cell to express a JNK3 protein/activity without the CC compound; (b) incubating a control cell under the same conditions and for the same time without the compound; (c) measuring JNK3 expression/activity in the cell in the presence of the compound; (d) comparing the CC amount of JNK3 expression/activity in the presence and absence of the compound, where a difference in the level of expression/activity. The CC invention also provides a transgenic non-human mammal having a transgene CC disrupting expression of a JNK3 gene, the transgene being chromosomally CC integrated into germ cells of the mammal. JNK3 expression inhibitoris, e.g. antisense nucleic acids, are used to treat disorders involving; CC excitotoxicity, e.g. Alzheimer's disease, Huntington disease, Parkinson's CC disaupting expression sclerosis, trauma, motorneuron disease, Parkinson's CC disease or epilepsy. The present sequence represents the nucleic acid CC disease or chuman JNK3 (Genhank Acca No: UJ4819). JNK3 sequences under CC GenBank accession numbers UJ4820, U07620, L27128, L35236, X12740 and CC V0727 can also be used in the method of the invention. (Updated on 20-

                                                                                                                                                                                                   The invention relates to identifying pain-regulating substances (A) comprises (i) incubating a test substance with a cell (or preparation from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analyssic activity. (A) along with nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB8506-ABB85037) that interact with (A); (B); vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polynucleotide of the invention
                                                                                                                                                                            Sequence 1505
                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes correlates with the presence of an comparison complexes with the presence of an comparison complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a comprising a microarray and a plurality of polynucleotide probes. The collars country are useful as hybridisable array elements in a microarray for monitoring control of target polynucleotides. The microarray can be used in functional action of target polynucleotides. The comparison of the diagnosis of an immunopathology, such as Crohn's disease, asthma, control of the diagnosis of an immunopathology, such as Crohn's disease, asthma, contentifying agents for the treatment of the diseases. The microarray may consecurate in drug discovery and development, toxicological and consecurated in drug discovery and development, toxicological and consecurated in purification of a subpopulation of mRNAs, cDNAs or genomic fragments. This sequence represents a human CDNA of the printed specification but was obtained in electronic format directly from microarray mand a control of the printed specification but was obtained in electronic format directly from the printed specification but was obtained in electronic format directly from the printed specification but was obtained in electronic format directly from the printed specification but was obtained in electronic format directly from the composition of the printed specification but was obtained in electronic format directly from the composition of the composition but was obtained in electronic format directly from the composition of the compositio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a composition comprising a plurality of cDNAs for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes, detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A composition comprising a plurality of cDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2003-895307/82

Note: The present sequence does not appear in the printed specification but was obtained in electronic format from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunopathological conditions, such as AIDS, allergies, anaemia, asthma, atherosclerosis, bronchitis, ulcerative colitis, diabetes, multiple sclerosis, osteoporosis, pancreatitis, infections and arthritis. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotides which are used as probes to detect genes differentially expressed in an immunological response, abundantly expressed in an immunological response and/or coding for a polypeptide known to regulate blood cell biology. The polynucleotides are useful in research and diagnostic applications particularly in cancer and install in research and diagnostic applications particularly in cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New compositions having a number of first, second and third polynucleotide probes, useful in research and diagnostic applications cancer and immunological conditions e.g. AIDS, diabetes, osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ss; gene; human; immunological response; blood cell; cancer; immunopathological; AIDS; allergy; anaems; asthma; atherosclerosis; bronchitis; ulcerative colitis; diabetes; multiple sclerosis; osteoporosis; pancreatitis; infection; arthritis; lymph node.

mitogen activated protein-kinase inhibitor in admixture with a carrier.

The method involves activation of a biological pathway producing an indicator of the processing of amyloid-beta precursor protein e.g. a indicator of the processing of amyloid-beta precursor protein e.g. a composition of a reporter e.g. alkaline phosphatase, of phosphorylated substrate of a kinase comprising AEG09266-AEG09268. The indicator induces the expression of a reporter e.g. alkaline phosphatase, of the pharmaceutical composition further comprises a label indicating use of the composition for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition. The agent is useful in the manufacture of a medicament for inhibiting the processing of amyloid-beta precursor protein in a subject suffering from or susceptible to the abnormal processing of the protein, or for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition, preferably, Alzheimer's disease. This sequence encodes human mitogen-activated protein kinase 10 (MAPKIO), transcript variant 2, a kinase involved in the up-regulation of amyloid-beta 1-42.

The invention also describes; a) an agent for inhibiting amyloid-beta precursor processing consisting of an antisense polynucleotide; a ribozyme or a small interfering RNA (siRNA), where the agent comprises a nucleic acid sequence complementary to, or engineered from, a naturally-occurring polynucleotide sequence encoding the polypeptide comprising the amino acid sequence of AEG09278 or AEG09279 and b) a pharmaceutical; composition comprising the agent for inhibiting amyloid-beta precursor processing on an amyloid-beta precursor processing-inhibiting amount of a pharmaceutical in the polypeptide of a p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying a compound that inhibits amyloid-beta precursor protein processing in a mammalian cell for treating e.g., Alzheimer's disease by measuring a compound-polypeptide property related to amyloid-beta peptide
                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2006-231019/24

                                                                                                                                                                                                   The invention relates to a method for identifying compounds that modulate CC c-Jun N-terminal kinase 3 (JNK3) expression or activity. The method CC comprises (a) incubating a cell that can express a JNK3 protein, or that CC sufficient for the cell to express a JNK3 protein and for a time CC sufficient for the cell to express a JNK3 protein/activity without the CC compound; (b) incubating a comprol cell under the same conditions and for activity in the cell in the presence of the compound; (c) measuring JNK3 expression/ CC activity in the cell in the presence of the compound; (d) comparing the CC amount of JNK3 expression/activity in the presence and absence of the compound, where a difference in the level of expression/activity. The CC indicates that the compound modulates JNK3 expression/activity. The CC integrated into germ cells of the mammal having a transgene CC disrupting expression of a JNK3 gene, the transgene being chromosomally integrated into germ cells of the mammal JNK3 expression inhibitors, CC e.g. antisense nucleic acids, are used to treat disorders involving capture points and sease, Huntington disease, ischemia, amyotrophic lateral sclerosis, trauma, mocorneuron disease, Parkinson's CC disease or epilepsy. JNK3 sequences under GenBank accession numbers CC the method of the invention. (Updated on 20-MAR-2003 to correct DR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁

                                                                                                                                                                                                                                                                                             The invention relates to a new composition comprising ADI61633-ADI61770and their complements that are cDNAs differentially expressed in brain disorders. Also included are a high throughput method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids and a high throughput method for screening a library of molecules or compounds to identify a ligand that specifically binds a cDNA. The expression of the each of the cDNAs is downregulated at least two-fold in the brain of the subjects with Alzheimer's disease (ADI61633-ADI61727) or upregulated at least two fold in Alzheimer's disease. (ADI61727) or upregulated at least two fold in For diagnosing or treating Alzheimer's disease. The present sequence is a cDNA downregulated at least two-fold in the brain of the subjects with Alzheimer's disease.

CC in brain disorders and chosen from any one of 138 nucleotide sequences of throughput method for detecting differential expression of one or more CDNAs in a sample containing nucleic acids; (2) an isolated cDNA (II) celebrated from AEAA3912, AEAA3810, AEAA3810, AEAA3813, AEAA3855, AEAA3856, CE AEAA3883 and AEAA3812, AEAA3813, AEAA3830, AEAA3831, AEAA3855, AEAA3856, CE (IV); and (6) a pharmaceutical composition comprising (V). (I) is useful CC (IV); and (6) a pharmaceutical composition comprising (V). (I) is useful CC (IV); and (6) a pharmaceutical composition comprising (V). (I) is useful CC (IV); and (6) a protein (V) produced using CC (IV); and (6) a pharmaceutical composition comprising (V). (I) is useful CC compounds to identify a ligand which specifically binds a cDNA, where the method involves combining (I) with the library of molecules or compound CC under conditions to allow specific binding and detecting specific binding cC (V), where the protein and recovering the protein from the CC compound. (V) is useful for high throughput method for screening a library of molecules or compound under conditions to allow specific binding which specifically binds (CV), where the method involves combining (V) or its portion with the compound. (V) is useful for purifying a ligand which specific binding to compound under conditions to allow specific binding specific binding between (V) and a molecule or compound. (V) is useful for purifying a ligand from a sample, which the specific binding, recovering the bound protein and separating the convolves immunizing an animal with (V) or its portion with the sample under conditions to convolves immunizing an animal with (V) or its portion under conditions to convolves immunizing an animal with the sample under conditions to convolve in the convolves in the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a composition (I) for the diagnosis, staging, treatment or for the monitoring of treatment of a subject with a brain disorder. (I) comprises several cDNAs that are differentially expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnosis; treatment; brain disease; neuroprotective; cerebrop muscular-gen.; cycostatic; neuroleptic; nootropic; antidepress anticonvulsant; analgesic; antiparkinsonian; ophthalmological; immunotherapy; gene therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       á
                      This invention describes a novel method of identifying a compound that inhibits the processing of amyloid-beta precursor protein in a mammalian cell. The invention also describes; a) an agent for inhibiting amyloid-beta precursor processing consisting of an antisense polynucleotide, a ribozyme or a small interfering RNA (slNA), where the agent comprises a nucleic acid sequence complementary to, or engineered from, a naturally-coccurring polynucleotide sequence encoding the polypeptide comprising the amino acid sequence of AEG09278 or AEG09279 and b) a pharmaceutical composition comprising the agent for inhibiting amyloid-beta precursor processing or an amyloid-beta precursor processing inhibitor in admixture with a carrier indicator of the processing of amyloid-beta precursor protein e.g. a indicator of the processing of amyloid-beta precursor protein e.g. a indicator in substrate of a kinase comprising AEG09268. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying a compound that inhibits amyloid-beta precursor protein processing in a mammalian cell for treating e.g., Alzheimer's diseaße by measuring a compound-polypeptide property related to amyloid-beta peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2006-231019/24.

phosphatase

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a

The pharmaceutical composition further comprises a label indicating use of the composition for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition. The agent is useful in the manufacture of a medicament for inhibiting the processing of amyloid-beta precursor protein in a subject suffering from or susceptible to the abnormal processing of the protein, or for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition preferably, Alzhaimer's disease. This sequence encodes human mitogen-activated protein kinase 10 (MAPK10), transcript variant 3, a kinase involved in the up-regulation of amyloid-beta 1-42.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-MAR-2000; 2000US-00540217.

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in retained disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodivérsity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                     Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc activity of (II) or to treat disease states involving (II). (II) is cuseful for generating antibodies against it, detecting or quantitating a cc polypeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging cof sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cc amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this catedotic disorders in the printed specification, but was obtained in clectronic format directly from WIPO at fig.wipo.int/pub/published_pct_sequences

```

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II) (II) is consisted the sequence of the following of the following of the following antibodies against it, detecting or quantitating a collower of the sequence of the sequence of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in treating disorders involving aberrant protein expression or biological activity. The collowing aberrant protein expression or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this collowing in the printed specification, but was obtained in celectronic format directly from MIPO at the invention of the invention of the printed specification of the printed specifica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

JNK are mitogen-activated kinases implicated in neurodegeneration and apoptosis of neurons. The derivatives are used to identify specific ligands. These ligands, and JNK3-specific antibodies, are used for prevention or treatment of neurodegenerative diseases, e.g. Alzheimer's, Parkinson's or Huntington's diseases, degeneration associated with aging or acquired immune deficiency syndrome, brain injury, or cerebral anoxia, hypoxia or edema. Vector syndrome, brain injury, or cerebral anoxia, hypoxia or edema. Vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                containing sequences encoding the derivatives are useful in gene therapy, e.g. of spinal cord injury and retinal degeneration. The present sequence encodes the derivative JNK3deltaNalphal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analgesic activity. (A) along with nucleic acid (ABL88411-ABL88411) that encode proteins (B, ABB85006-ABB85037) that interact with (A), (B), vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polynucleotide of the invention
The invention relates to a novel differentiation inducing agent of a leukemia cell. The agent comprises an expression activator or functional activator of a promyelocytic leukemia (PML) protein, or an expression inhibitor or functional inhibitor of the PMLK protein (a PML specific
                                                                                                      Differentiation inducing agent of leukemia cell useful as leukemia therapeutic agent, comprises expression activator/functional activa promyelocytic leukemia protein, or expression inhibitor/functional inhibitor of PMLK protein.
                                                                                                                                                                                   P-PSDB;
